

ZEUS ENGINEERING

FULL PITCH DECK - RECONSTRUCTED REFERENCE COPY

\$1-2M SERIES A

Bitcoin Mining Infrastructure - Vietnam - Modular Data Center Vision

Important provenance note: This is not the original ZEUS-designed PDF. The former official pitch page is currently unavailable when opened normally, but its full text remains indexed from the official zeus-engineering.com domain. This document reconstructs the complete substantive deck content from that indexed official page so it can be supplied to a website developer as a stable reference. Wording has been lightly formatted and obvious spelling/punctuation issues normalized; factual claims remain ZEUS's published claims and should be independently verified before external publication.

What Are We Asking For?

ZEUS Engineering is seeking **US\$1-2 million in Series A venture-capital or private-equity funding** to scale its Bitcoin-mining operations in Vietnam while reducing operating expenses.

ZEUS's published projection for the first year following completion of the new facilities and client onboarding is approximately **20 BTC per year**. Of this, approximately **10-15 BTC per year** is projected from company-owned mining equipment (200 machines), with an additional **4-5 BTC per year** from hosted-mining services (300 machines).

ZEUS projects profit after expenses of approximately **10-15 BTC per year**, and describes total systemized asset value of approximately **US\$3 million**, including assets under management.

Status: These figures are management projections, not current realized results.

Who Are We, and What Do We Do?

ZEUS describes itself first and foremost as an **engineering company based in Vietnam**, specializing in big data and big power, including the use of renewable-energy sources.

At the time of the pitch, ZEUS states that its core focus is Bitcoin-mining operations, citing Bitcoin's value, liquidity and established market for the company's computational output.

ZEUS reports operating a **100 kW facility on a 300 m² site** in the Vung Tau / Ba Ria region, with **more than 1 PH peak hash power** and **20 kW peak solar**.

The company states that it has opened hosted-mining services, allowing clients to pay setup and service fees for ZEUS to run and maintain mining equipment on their behalf, expanding its potential client base internationally while increasing assets under management.

Company History and Team

The Company

ZEUS states that its team began working with Bitcoin mining eight years before the pitch and officially registered ZEUS Engineering four years before the pitch. The pitch describes the business as a privately held, multiple-member limited-liability company with shares, registered in Vietnam under **MST/CRN 0317377894**.

The company states that it is financially self-sustaining and that pre-seed and seed funding were completed using internally generated funds reinvested from its Bitcoin-mining operations.

The Team

Tatts Nguyen - Founder & CEO

Vietnamese entrepreneur with experience in multinational corporate environments, particularly insurance companies.

Chris Gainer - Co-Founder & CTO

Australian private investor and Vietnam resident; Electrical and Electronics Engineer and entrepreneur. The pitch describes approximately 20 years of experience in heavy-industrial engineering environments and military operations and leadership.

Quynh Nguyen - Head of Accounting & Legal

Described as bringing strong corporate-governance knowledge.

Valentine Cheval - Chief Brand & Marketing Officer

Described as having a background with Bitcoin.com and BitMEX.

The Plan

1. Acquire a larger industrial site in the Vung Tau / Ba Ria region - up to 2,000 m² - with factory/warehouse space sufficient to house, power and operate up to 500 Bitcoin-mining machines.
2. Purchase 200 new Bitcoin-mining machines for company operation, with a management projection of 10-15 BTC per year.
3. Onboard 100 hosted-mining clients representing a total of 300 additional mining machines, with 10% of earnings in service fees to ZEUS.
4. Reach a grand total of 500 machines online and operational.
5. Fit out the site with up to 500 kW peak solar, with ZEUS estimating potential savings of up to 10% in overall power expenses.
6. Increase total power consumption/capacity toward 1 MW and then 2 MW, with the goal of accessing wholesale power rates in Vietnam and reducing operating power expenses.
7. Establish factory workshop/floor space for trial fit-outs and manufacturing of containerized units for the company's future modular-data-center plans.

Why Invest in Us, and Why Vietnam?

Why Vietnam?

Low Capex and Opex

ZEUS argues that Vietnam offers comparatively low land, factory setup and workforce costs, supporting capital-efficient infrastructure development.

Competitive Power Rates

The pitch describes Vietnam's power rates as competitive and says further benefits may be available at wholesale consumption levels above 1 MW.

Abundant Sunlight

ZEUS highlights Vietnam's year-round sunlight and access to locally and regionally manufactured solar equipment as an opportunity to reduce power expenses through solar integration.

Supportive Government Policies

The pitch argues that Vietnam is seeking greater participation in data centers, AI technology, regulated digital-asset markets and foreign investment. Any current regulatory statements should be independently re-verified before publication.

Convenient Logistics

ZEUS highlights Vietnam's proximity and trade relationship with China, where much of the required equipment and components are manufactured or distributed.

Comparatively Low Taxes

The pitch cites a nominal Vietnamese corporate tax rate of 20% and refers to potential reductions or customs treatment for certain computing/software activities. Tax statements should be professionally verified before investor publication.

Why ZEUS?

- Four-year established company at the time of the pitch.
- ZEUS describes itself as audited and prepared for operational scale.
- Locally owned with a foreign co-founder.
- Eight years of Bitcoin-mining experience claimed by the team at the time of the pitch.
- Strong understanding of the local operating environment and governmental policies.
- Import/export license and established logistics and payment rails.
- Engineering chief with approximately 20 years of experience.
- Experience operating through difficult market cycles and bear markets.
- Existing tooling, test and repair equipment, and associated technical skills.
- Small, highly skilled and motivated team.
- Experience operating leanly and allocating limited capital efficiently.
- Operational mistakes and lessons that ZEUS says have provided knowledge of pitfalls, risks and mitigation.

Long-Term Vision

ZEUS states that its long-term vision is to become a world-leading provider of **modular, transportable, containerized data centers** built in Vietnam and deployed worldwide.

After the proposed Series A expansion becomes operational, ZEUS says it intends to begin prototyping and testing its own containerized models designed for compatibility with **Bitcoin mining, AI and quantum-computing data-center applications**.

At the same time, the company describes an ambition to begin a **US\$10-20 million Series B** fundraising round to realize that phase of the project.

Following deployment of operational modular units, the pitch describes a future **US\$100 million Series C** ambition to expand and scale operations.

Beyond those stages, ZEUS discusses a longer-term ambition to take the company public and pursue deeper research and development in emerging compute technologies.

The pitch further states an ambition to become a trusted government and international provider of modular containerized data centers and to participate in broader R&D; across Bitcoin, AI and quantum computing.

Status: Series B, Series C, public-company and advanced-compute statements are long-term ambitions, not completed financing or deployments.

Current Website Product / Concept Context

SSMDC - Small Solar Modular Data Centre

The current ZEUS website describes SSMDC as a rapidly deployable system using approximately 100-200 kW of available grid power with up to 100 kW supplementary solar, suitable for Bitcoin mining and/or AI compute, with automation and remote-monitoring concepts.

S3XY AI

The current website describes S3XY AI as a private, in-house AI concept intended for business and engineering tasks including accounting, legal, reception, strategic planning, engineering research and design.

Ai-1

The current website describes Ai-1 as an all-in-one solar-focused concept intended to provide Bitcoin mining and AI compute using solar power without a grid connection, with a longer-term decentralized-network vision.

Common Questions

Does it cost more in power than you make in Bitcoin?

ZEUS's published answer emphasizes managing power use and cost through efficient equipment, wholesale power rates and renewable-energy sources.

Don't the machines become obsolete?

ZEUS acknowledges technology obsolescence and emphasizes extracting value during the equipment's higher-return period, maintaining an upgrade plan and considering lower-cost power for older equipment.

Is mining illegal in Vietnam?

ZEUS's pitch states that Bitcoin mining itself is not illegal and distinguishes it from illegal power theft. Regulatory claims should be re-verified before publication.

Is Bitcoin illegal in Vietnam?

The pitch states that Bitcoin is not legal tender in Vietnam and describes ownership as an asset-related matter. Current legal treatment should be independently re-verified.

Do you pay taxes?

ZEUS states that it operates as a functional company complying with applicable tax laws and refers to depreciation and continued reinvestment in its operations.

How do you manage heat?

ZEUS says it manages airflow using conventional approaches including fans, water radiators for hydro systems and airflow-control systems.

What about Bitcoin price volatility?

ZEUS's original pitch expresses a long-term positive view of Bitcoin based on its years of industry experience. This is the company's viewpoint, not a guaranteed market outcome.

Why not simply buy Bitcoin?

ZEUS's pitch argues that mining can produce Bitcoin below the purchase price while equipment continues operating. This is a company claim and depends on hardware, energy, network difficulty, Bitcoin price and other variables.

Does Vietnam have the workforce skills required?

ZEUS acknowledges a skills gap and says it addresses this through technical leadership and local operations.

How does this relate to AI and quantum computing?

ZEUS frames Bitcoin mining, AI and future advanced computing as infrastructure-intensive computing problems requiring facilities, engineering, power and thermal-management capabilities.

Contact / Closing

The original pitch closes by inviting potential supporters and investors interested in participating in the company's Bitcoin-mining and infrastructure expansion to contact ZEUS for further discussion. It also invites feedback on how the pitch could be improved.
